Internet at the speed of light

Fibre internet service built on our own private infrastructure.

Fibre internet means business

Fibre internet from Start.ca gives you the bandwidth and speed your business needs for maximum productivity, as well as scalability to meet your changing demands, no matter how large you grow. Upgrade to fibre and avoid the slow speeds, high latency, and maxed out internet connections that are costing you money.

With fibre internet, data is carried by light pulses moving through a strand of lightweight optical fibre instead of the copper lines used in traditional internet service. As thin as a human hair, these strands of glass can carry digital information over impressively long distances without speed degradation.

Since fibre is an optical system and doesn't carry an electrical current, it isn't impacted by lightning storms and other weather systems, which adds to its reliability. Add the bandwidth and speed gains you get with fibre and you'll quickly realize upgrading your connectivity is a smart investment.

Flexible
• Highest capacity
• Scalable

Fast
• Speeds up to 100 Gbps
• Lower latency

Protected
• 24/7 local support
• Most reliable

Business and Enterprise differences

Business
• Controlled shared environment using GPON technology
• Asymmetrical speeds up and down

Enterprise
• Dedicated connection
• Symmetrical speeds up and down
• 100% uptime commitment

Custom dark fibre solutions

We offer dark fibre to our Enterprise level data centre customers. Dark fibre is a private fibre optic network that runs directly between our data centre and your location, and performs seamlessly as if your equipment were right there in the office with you.

Since there aren't any active devices (such as switches and routers) between your end points, dark fibre is one of the most secure forms of connectivity available. Your service isn't routed through the public internet — it is your own private strand of glass.

Reliable service we're proud to stand behind

We provide a flexible customized solution: the fastest internet service available, built on our own end-to-end fibre network, installed and supported by local technicians. We begin the process by sitting down with you and getting to know your business and what you need, then we work with your IT provider to build a truly collaborative relationship.

Keeping your business connected is a huge responsibility and trust is essential — you need to know we'll always be there. Building our own fibre infrastructure means we have invested in the community, and we are committed to being part of London for decades to come.
